## Education

---

### Carnegie Mellon University

August 2024 – Present

*B.S. in Statistics & Machine Learning and Computer Science*

*Pittsburgh, PA*

- **QPA:** 3.68/4.00
- **Relevant Coursework:** Introduction to Computer Systems, Introduction to Machine Learning, Principles of Functional Programming, Introduction to Computer Security, Principles of Imperative Computation, Probability and Statistical Inference I/II, Statistical Computing
- **Awards:** Dean's List, High Honors (Spring 2025, Fall 2025)

## Experience

---

### Teaching Assistant, Principles of Functional Programming (15-150)

January 2026 - Present

*Carnegie Mellon University*

*Pittsburgh, PA*

- Facilitate weekly lab sessions and office hours for 20+ students, guiding them through algorithmic problem-solving in Standard ML.
- Assist professors in grading and proctoring exams, providing detailed feedback on concepts such as recursion, parallelism, and higher-order functions.

### Research Assistant

September 2025 - Present

*FastML Lab*

*Pittsburgh, PA*

- Implement a high-granularity quantization-aware training pipeline for FPGA-based GNNs used by CERN's CMS experiment with PyTorch, PyG, and HGQ2 while optimizing for microsecond-latency performance.
- Develop transformers for real-time rapid reconstruction of High-Granularity Calorimeter energy clusters.

### Machine Learning Research Assistant

June 2025 – August 2025

*CMU SPICE Lab*

*Pittsburgh, PA*

- Engineered a data preprocessing pipeline using R Tidyverse, Pandas, NumPy, and SciKit-Learn to clean and normalize large-scale energy consumption datasets.
- Developed a neural network with PyTorch to forecast households' annual cooling energy, engineering a 75% accuracy improvement by implementing LightGBM-based feature selection and hyperparameter tuning (e.g. learning rate annealing, early stopping).

## Projects

---

### Dynamic Memory Allocator

July 2025

- Developed a dynamic memory allocator using segregated free lists in C. Achieved 74.3% memory utilization and 15885 kilo-operations per second, ranking first in the class by performance.

### Tiny Linux Shell

July 2025

- Built a lightweight Linux shell in C featuring job control and I/O redirection.
- Improved performance and mitigated race conditions by implementing signal masks and custom signal handlers to manage background process synchronization.

### Web Proxy Server

July 2025

- Created a web proxy server in C. Optimized performance and reduced latency by introducing concurrency with POSIX Threads to handle individual client HTTP GET requests.

## Skills

---

**Programming Languages:** Python, C, SQL, Java, SML, Dafny, x86-64 Assembly, R

**Frameworks/Libraries:** Pandas, NumPy, scikit-Learn, PyTorch, Matplotlib, Tidyverse

**Developer Tools:** Git, Linux, PortSwigger Burp Suite, GDB, Valgrind
